

Personal Information			
Name	Andreas-Alexandros Vasilakis	City/Date of Birth	Corfu, Greece, 12.10.1983
Email	andreas.alex.vasilakis@gmail.com	Website	https://abasilak.github.io/
Current Work Position: Computer Graphics Postdoctoral Researcher, Athens University of Economics and Business, Dept. of Informatics, Greece			

Education	
09.2008 - 01.2014	Dept. of Computer Science & Engineering, The Ioannina University, Greece PhD in Computer Graphics, 10.0
02.2006 - 07.2008	Dept. of Computer Science, The Ioannina University, Greece MSc in Software, 8.92
09.2001 - 02.2006	Dept. of Computer Science, The Ioannina University, Greece BSc in Computer Science, 7.22

Working Experience	
09.2018 - 12.2018 10.2017 - 08.2018	Think Silicon S.A., IT Company, Greece Senior Graphics Software Engineer Graphics Software Engineer Software design, development, build, testing, integration, monitor, documentation of graphics drivers and development kits for low-power graphics solutions. Participation at weekly OpenGL/Vulkan teleconferences & face-2-face meetings of Khronos Group.

Research Experience	
03.2020 - 06.2021	Athens University of Economics and Business, Dept. of Informatics, Greece Postdoc Researcher - LumiBricks: Modular Illumination Transfer for Photorealistic Visualization on Commodity Hardware
06.2019 - Now	Research and development on interactive rendering via novel machine learning. - Rayground: an online tool for rapid prototyping of ray tracing algorithms
11.2019 - 12.2019	Research and development on web-based ray tracing solutions - Proof-of-concept implementation of coarse shading technologies for the ARM Mali-G76 Bifrost architecture
04.2019 - 10.2019	Development of coarse shading technique on Android devices. - Big Data Visualization for Transaction Data Technical Report on "Recent Information Visualization Research with Applications on Financial Data"
10.2017 - 05.2018 06.2018 - 11.2018	Think Silicon S.A., IT Company, Greece Computer Graphics Research & Development - LPGPU2: Low-Power Parallel Computing on GPUs 2 - GPU-WEAR: Ultra-low power heterogeneous GPUs for Wearable/IoT devices Software design and development of GLOVE ; an open-source cross-platform software library that translates at runtime OpenGL ES API calls to Vulkan API commands.
02.2016 - 10.2017	Information Technologies Institute, Centre for Research & Technology Hellas, Greece Postdoc Researcher FRAILSAFE: Sensing and predictive treatment of frailty and associated co-morbidities using advanced personalized models & advanced interventions

	Coordination of the first work package of the project. Serious games design and content creation. Implementation of interactive geovisualizations . Development of high-performance rendering solutions for mobile and VR/AR devices.
04.2014 - 01.2016	Athens University of Economics and Business, Dept. of Informatics, Greece Postdoc Researcher GLIDE: Goal-driven Lighting for Dynamic 3D Environments Project coordinator & management. Research and development of real-time multi-fragment methods with applications on realistic global illumination effects.
03.2014 - 03.2014	The Ioannina University, Dept. of Computer Science & Engineering, Greece Postdoc Researcher Epirus On Androids Dissemination, communication, community building and exploitation.
09.2010 - 11.2013	Doctoral Researcher Heraclitus II Technical contribution to the field of photorealistic rendering, processing and visualization of large, animated and complex 3D data.
07.2008 - 08.2008 10.2007 - 12.2007	Master Researcher AEOLUS: Algorithmic Principles for Building Efficient Overlay Computers <i>Georouting: Placing and Routing in VLSI using Geometric Constraints</i> Research and development.
03.2012 - 06.2012	University of Cyprus, Dept. of Computer Science, Cyprus Doctoral Researcher <i>LLP/ERASMUS practical training program on applied research in Computer Graphics</i> Research and development on crowd animation systems.
02.2009 - 10.2009 12.2007 - 03.2008	The Aegean University, Dept. of Prod. & Systems Design Engineering, Greece Research Associate <i>A New Parametric CAD system for the Reconstruction of Traditional Jewellery</i> Implementation of advanced 3D mesh segmentation algorithms. Development of point cloud rendering system for 3D CAD models. Porting triangulation and normal estimation procedures on the graphics hardware.

Scientific Achievements

Synopsis of research. A major part of my research is focused on various techniques and algorithms for *geometry processing* and *interactive rendering* of arbitrary mesh animations. My work has been published in high-ranking journals (IEEE TVCG, CGF, etc.) and leading international conferences (SIGGRAPH, EG, I3D, etc.) with peer review offering strong technical contribution to the field of photorealistic rendering, processing and visualization of large, animated and complex 3D data.

Geometry Processing. Within this extensive area, my work mainly covered two significant problems; (i) *compression* and (ii) *segmentation* of deformable meshes. The novelty of my research is inspired by the observation that only small deformation variations will normally occur between consecutive poses. By exploiting temporal coherence, my work offers novel approaches to support fast and efficient lossy compression (in terms of PCA and skinning), editing as well as segmentation of high-deformable animations ideally suited for real-time scenarios. Building on this experience, my goal is to further research interactive methods for processing of dynamic geometry data generated via scanning operations, content-creation tools and physical-based simulators.

Interactive rendering. Visibility determination is a standard stage in developing numerous appealing and plausible visual effects for interactive 3D games and graphics applications. Capturing multiple fragment samples efficiently on the GPU is a challenging task in terms of time, memory and robustness. My work studied the multi-fragment rendering problem from various perspectives and alternatives for reducing fragment-contention, avoiding fragment-overflow as well as eliminating z-fighting artifacts. Last but not least, my work was further extended to support interactive global illumination techniques via complete multi-fragment ray tracing solutions. My future research focuses on different aspects of interactive rendering with applications on global illumination and image-based techniques for interior visualization on VR/AR platforms, while expanding and blending with other domains and mathematical foundations (machine learning) to broaden the computer graphics tools and algorithms.
